I was also a part of project focused on Stock visualization , where i contributed to presenting financial data in intuitive and interactive manner.

PROJECTS

1.)Single Page Portfolio Website

- This project aims to develop a modern, responsive, and visually appealing single- page portfolio website to showcase personal or professional achievements. The website will feature an intuitive UI, seamless navigation, and an engaging layout to highlight key sections such as:
- About Me - A brief introduction and professional background.
- Projects - A showcase of selected works with descriptions and links.
- Skills & Expertise - A visual representation of technical and soft skills.
- Contact Information - A form or direct links to email and social profiles.

2.)Personal Expense Tracker

The Personal Expense Tracker is a simple web-based application that allows users to track their daily expenses. Built using HTML, CSS, JavaScript, jQuery, and Bootstrap 5, this project leverages LocalStorage to persist user data across sessions. The application enables users to add, view, and delete expense entries and provides a responsive user interface with summaries and filters for efficient tracking.

3.) To-Do List

The Personal Expense Tracker is a simple web-based application that allows users to track their daily expenses. Built using HTML, CSS, JavaScript, jQuery, and Bootstrap 5, this project leverages LocalStorage to persist user data across sessions. The application enables users to add, view, and delete expense entries and provides a responsive user interface with summaries and filters for efficient tracking.
